

Princeton City Schools

We provide Managed Services, an Instructional Design Coach, and Edge•U Badges to Princeton, supporting their Information and Instructional Technology. Our Coach provides day-to-day instruction, and through Edge•U we support on-demand educator PD

The challenge

As teachers and students returned to their classrooms after the pandemic, teachers began to abandon technology use. District leaders needed to consider effective instruction methodology and technology in and out of the classroom. Princeton wanted to ensure that students were provided with an equitable learning experience, with a focus on supporting teachers with technology.

The solution

Forward Edge provides a comprehensive approach to support Princeton's IT and instruction needs. Managed Services ensures the infrastructure is equipped to handle digital learning throughout the district. Instructional coaches provide job-embedded support of Google Workspace features in the classroom. Edge•U Badges provides anytime, anywhere learning opportunities to close the digital use divide.

The results

Educators are implementing new digital skills with confidence on a daily basis. Teachers have the opportunity to work on their own with Edge•U while also getting face-to-face support when needed. Google Classroom has become broadly used as the district LMS. Educators are embracing Google tools and using them in the face to face classrooms district-wide.

“As a lifelong educator, I have attended hundreds of trainings. Many of those are sit-and-get, where you are in a chair for several hours. Not surprisingly, much of the content presented is lost. That is not the case regarding the Google PD hosted by Forward Edge. The engagement was incredible, and throughout our journey, the interaction led to a much deeper understanding of Google products.”

Tom Burton, Superintendent, Princeton City School District

About Princeton City School District

Princeton City School district consists of approximately 5,800 students. They have a large ELL population and a diverse socio-economic status. They are currently 1:1 with Chromebooks and use Google Classroom. Through community outreach, they create innovative teaching and learning opportunities, empowering students to reach their full potential.

Industry: Education

Primary project location: United States

About Forward Edge (Katie Siemer)

Forward Edge is a leading K-12 technology solutions provider in Ohio, dedicated to empowering schools to reach tomorrow's learners.
