"Weather & Globe" is an iPad, iPhone and watch app that displays a map as a globe along with the weather conditions. The user can navigate the globe using swipe or tap. Tap once to make the globe stop rotating. Tap again to start the rotation of the globe. The app displays weather related information, based on the user's IP address. A small emoji shows the weather condition (Rain, Haze, Snow or Wind) along with the temperature. There are effects for Heavy Rain, Heavy Snow, Blizzard, Partly Cloudy, Fog etc. The user can long press the sphere to change the image texture. Double tap once to remove the globe. If you want the globe double tap again. Also, with users permission, the app sends notification when new location is entered.

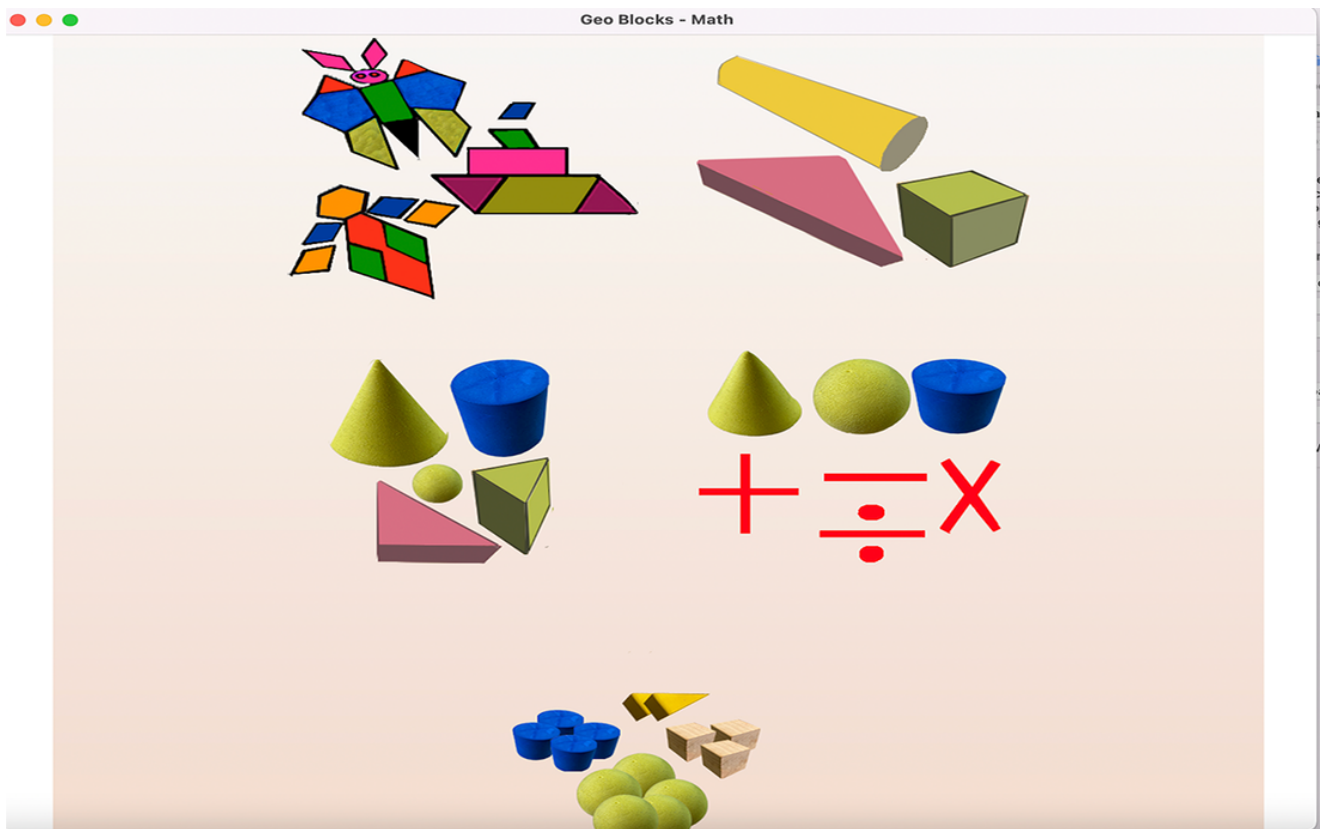

"Kidz Learn Geometry" sets the basic foundation in Geometry by reviewing and going through the basic concepts. The app begins with an overview of the Geometric objects - line, ray, point, segments and angles. The app then gives an overview of various types of angles in two dimensional space and then explains the concept of congruency in segments and angles by exploring a few examples. The app also focuses on reviewing and re-reviewing the contents through quizzes and proof analysis and solving.

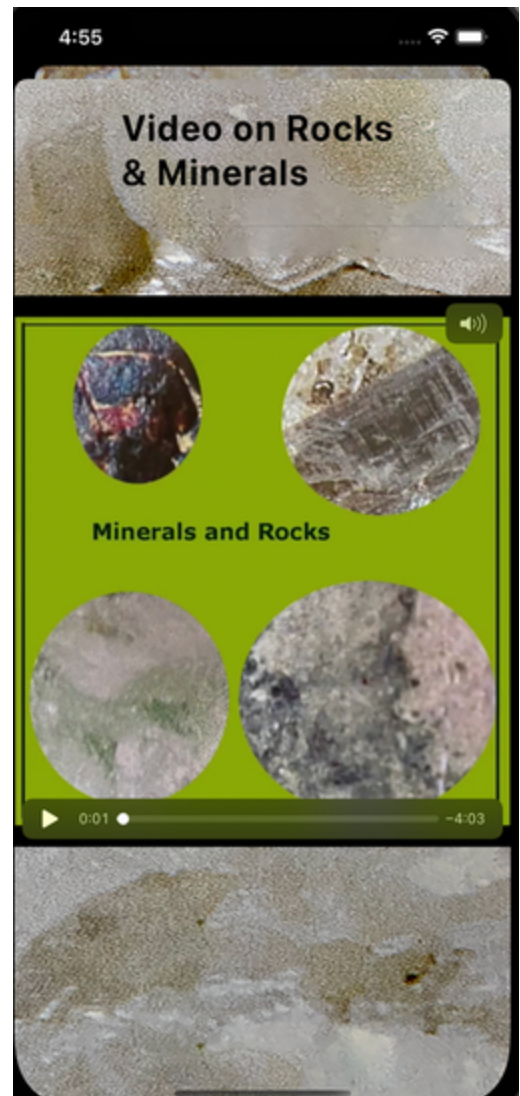

"Kidz Learn to Write" :-

"Geo Blocks - Math" is an app that shows various geometric shapes in 3D space. In 3D shapes, this app has questions on whole and part of a geometric shape and building different shapes from other geometric figures. A brief video describes

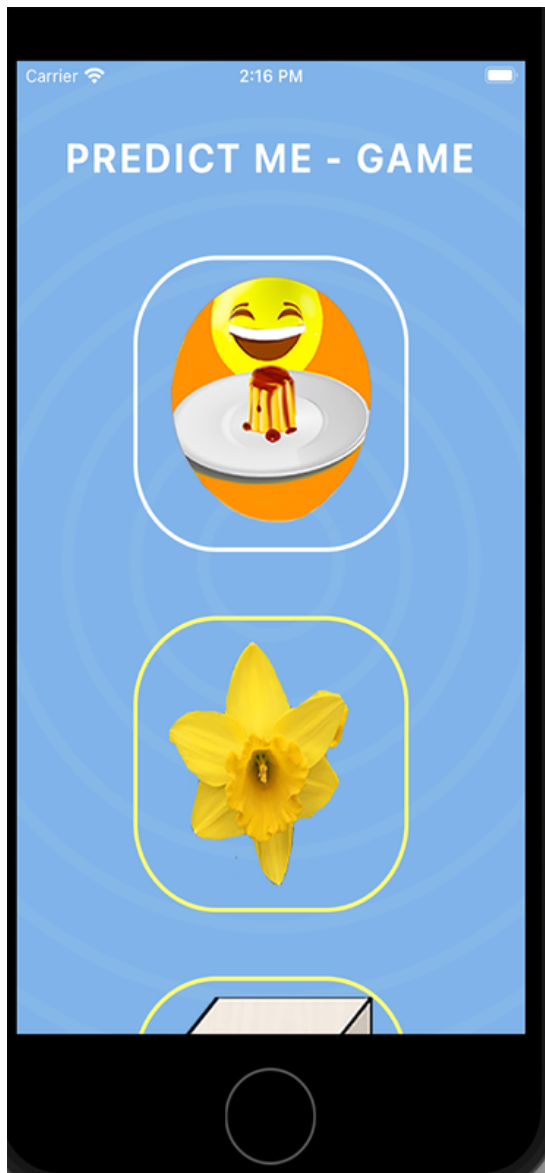

different scenarios and keywords to spot for using different arithmetic operations. There are also simple math word problem questions to solve, based on various operations - plus, minus, divide and multiply.

"Minerals & Rocks" application describes various minerals, their properties and their formation. This app categorizes and sketches the difference between minerals and rocks, by taking a few examples to describe their formation. This app is educational and can be used as a reference to know important properties such as a mineral's Hardness, Cleavage, Fracture, Crystal form, and Fluorescence. This app also has an option to pause and play the audio. There is also a quiz section with a set of questions, to review your knowledge on rocks.

"PredictMe - App " is a fun play that predicts your favorite dessert , flower and number. This app asks a bunch of questions and the player has to answer 'yes' or 'no'. The game predicts based on the player's choice and also describes a fun fact or a personal trait of the player. It is a fun activity to engage with your friends, family or just play solo. This game has a dark screen mode.

"Graphs and Slopes " explains the concept of linear equations in Math. This app categorizes the graph concept into bite size information. The core points like y-intercepts, slopes and graph plotting are explained with examples. Review questions at the end of the category, asks questions pertaining to these concepts and even has the option to provide hints and answers to reinforce your understanding.

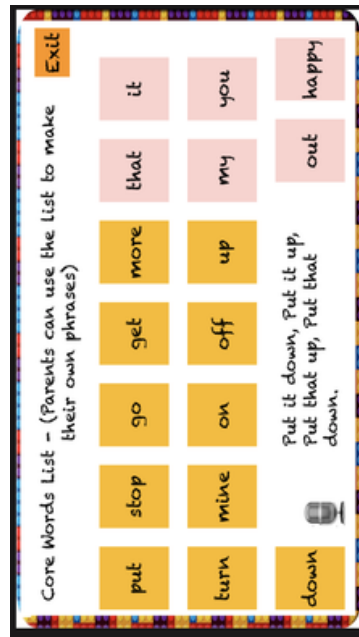

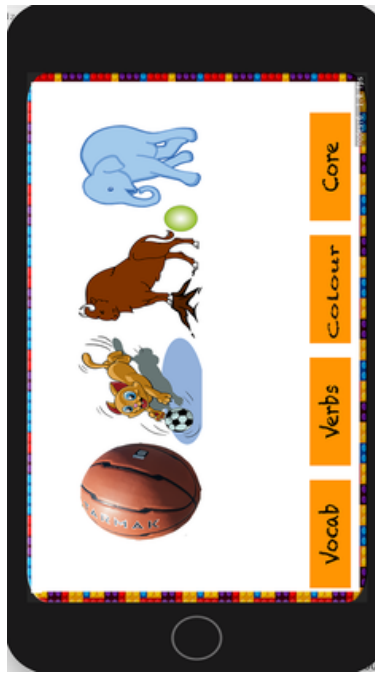

"Kidz Learn Vocabulary" is an educational app that has simple words for preschool and Kindergarten age kids. This app also has numbers section to learn numbers 1 - 50. This app has audio to make and identify the 3 letter word, seasons , current weather condition, and also today's date , month and year.

This app is also divided in to sections - vocabulary, usage of verbs, prompts for colors, shapes, numbers and rendition of core words. This is an interactive app that young kids can touch and identify the seasons, letters, words, pictures and numbers. The audio in this app help aid kids to repeat the words and the questions.

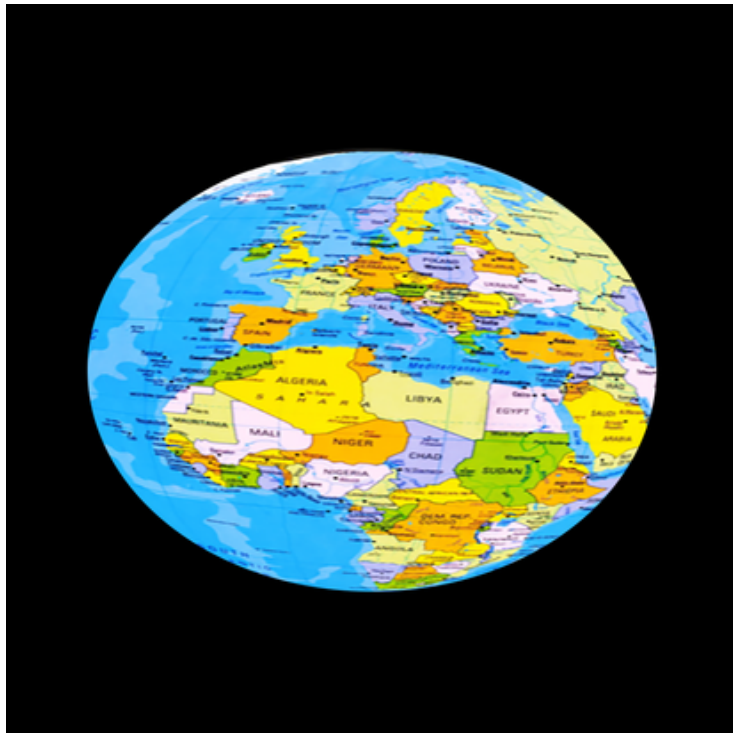

"Triangles in Geometry" is an educational app that starts by describing the triangle basics - (Acute, Obtuse, Right Angle) and then progresses to explain the various centers in a triangle - (Centroid, Incenter, Orthocenter) and Area. The app also summarizes and explains with images, triangles Theorems, and Postulates (Proofs). Review questions (Quiz) at the end of the section has a few problems based on the triangle Theorems and Postulates.

"Rotating Globe" is an augmented reality app that displays world map as a globe. The Globe float's in front of you. The user can navigate the globe using swipe or tap. The user can also find the current Weather conditions by entering zip code. The user can enter a US zip code and get the current weather information. A small emoji shows the weather condition (Rain, Haze, Snow or Wind) along with the temperature. There are also effects for Rain, Snow, Wind , Cloud and Haze.

If the user wants to look at a particular continent or a country in the globe , just tap once. The globe stops rotating. When tapped again , the globe will start to rotate. The user can also swipe left , right , up and down to see different places, countries and continents in the rotating globe. The user can combine swipe and tap to navigate around the rotating globe to see different places and enhance their general knowledge.

"Two Iguanas" is a fun entertaining application for kids that also provides educational information on iguanas in the wild using simple animation and video. This app says a short story about two iguanas with illustrations, narration and a super short video. This application is educational as it has an audio button that states and identifies all the verbs for all the sentences on each page of the story. The quiz section at the end asks simple questions about iguanas from the story and the video.

"Kidz Learn World Sports and Angles":- This is an educational app that describes popular and rare sports played around the world. This app also describes various angles taking different sports as an example. This app also has facts and questions which allows kids to know about different angles in the 2-dimensional space.
