All-In-One Student and District Management
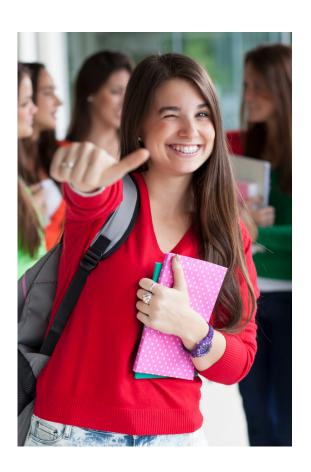

A case study examining an enterprise management solution in the K-12 education environment over single solution providers.

Bright Solutions, Bright Schools

THE CHALLENGE

Managing student and district data was a consuming and complex challenge for the mid-size midwestern school district. The onsite challenges to manage servers, integration of the student data from more than 20 different applications and then layered on top of these, the state reporting requirements presented unique challenges. The IT department felt overwhelmed in just trying to keep all systems operational and never really had time to create the modern digital community of care that would best serve the students, teachers and staff while connecting with their district families.

THE SOLUTION

There are two parts to the solution, presenting and maintaining a robust, connected digital platform while building a long-lasting strategic partnership with every school district.

An all-in-one enterprise management solution not only allowed the district to save money, but It also created a secure and connected school district. Real time data that lets educators make the best decisions for all students.

There is a two way flow of information with trust that allows Lumen Touch and the district to have an integrated partnership, creating the best environment for success.

AT A GLANCE

CHALLENGES

- Disconnected Systems
- Overwhelming Tasks
- Lack of Real Time Data
- Teacher Engagement
- Costs to District

SOLUTIONS

- All-in-One System
- Streamlined Processes
- Real Time Data Dashboards
- Interactive Student Engagement Tools
- Cost Effective

STATISTICS

- 9 District Buildings
- 1 Career Tech Center
- 4500 Students
- 390 Certified Staff

TESTIMONIAL

Not many companies can boast about having a single-platform solution like Lumen Touch that responds to the customer and market demands, that decreases the cost of a comprehensive digital platform in a time of financial crisis, and provides the security in a world of cyber insecurity.

DIRECTOR OF TECHNOLOGY

Midwestern School District

BENEFITS

All-In-One Solution

A single data base to support all aspects of a school district's needs not only allows for integrated data dashboards and applications, but It also lifts the burden on the IT department from managing 20 different systems.

Save Money & Create Efficiencies

The district is saving over $32,000 annually and has created new efficiencies when it comes to Inventory Management, Attendance Processing, and Data Reporting.

Increase Student Engagement

An improvement in the quality of learning for students was also noted. Immediate feedback on learning, automation of processes, and interactive assessment tools allowed teachers to dedicate more time to helping students one-on-one. The time savings afforded teachers is almost immeasurable.

Real Time Data to Make Informed Decisions

One of the biggest benefits was the ability to have a complete, and single database allowing the district to showcase real time data in all aspects of student achievement. The ability to easily access data allows educators to make the best decisions for all students' success.
