

# Our Product

hihilulu Atelier® is an 'All-in-one' Chinese immersion platform for preschools, kindergartens, elementary schools and Chinese teachers. It has the first online comprehensive Chinese curriculum with innovative course kits specially designed for children from 3 to 12 years old.

## Professionally designed coursewares

A teaching plan specially designed for children of non-native Chinese language, which divides 800 commonly used words into 6 levels for progressive learning.

## Extra digital resources such as reading materials with audio and interesting exercises

A selection of high-quality reading materials can enrich children's language learning resources and environment, and improve children's listening and reading skills. The well-designed various interesting interactive exercises help children consolidate the knowledge they have learnt in multiple dimensions and achieve immersive language acquisition through repeated practice.

## Evaluation system with more than 3000 questions

A self-developed evaluation system with more than 3,000 interactive tests evaluates listening, speaking, reading, writing, comprehension skills and tracks learning progress and outcome of each student.

## Personalized professional management tools

The software has powerful teaching management functions. The administrators of schools and institutions can manage students, classes and teachers; teachers can directly use the platform for student management, class management, teaching plan formulation, classroom teaching, homework assignment, and student learning progress tracking and feedback, etc.; both students and parents can log in through their own channels to complete homework, perform after-school exercises, and view children's learning situation.

The professional management function can easily transform the traditional Chinese classroom into a modern, energetic, efficient and interesting classroom, and provide teachers with a full range of teaching content and technical support.

## Transparent data reporting

Data says everything. Our online platform can provide you with transparent data services, such as generating regular progress reports, so that school leaders and managers can understand the progress of the Chinese class. Compared with traditional teaching, this is a huge advantage, because everything is controllable. In traditional teaching, only Chinese teachers can influence and determine the teaching and quality of Chinese courses.
