# Ask2Learn
the Teacher Growth Platform

Administrator Dashboard

The following charts represent analysis of real classroom lessons. Administrators, Coaches and Teachers use these Ask2Learn reports, goal tracking, and collaboration tools to understand how instruction is delivered and to develop plans to grow as individual educators and as a faculty.

The report is organized into sections showing examples across the faculty, grades, and subjects. It is important to note there are no right or wrong values for each of these metrics. Usage of a particular technique may vary greatly depending on grade, subject, instructional model, and where the teacher is in the lesson plan. By automating the observation process Ask2Learn enables administrators to understand and improve how instruction is delivered everyday across the entire faculty. Ask2Learn provides higher fidelity and more data compared to time consuming and expensive manual observation protocols used in most school systems.

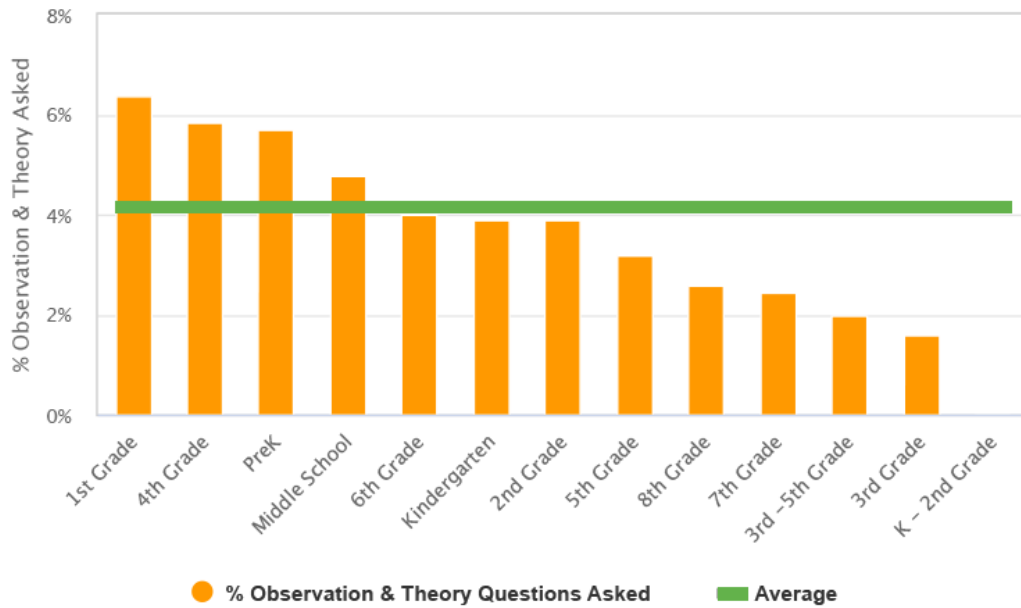

% Questions vs. Statements: All Time
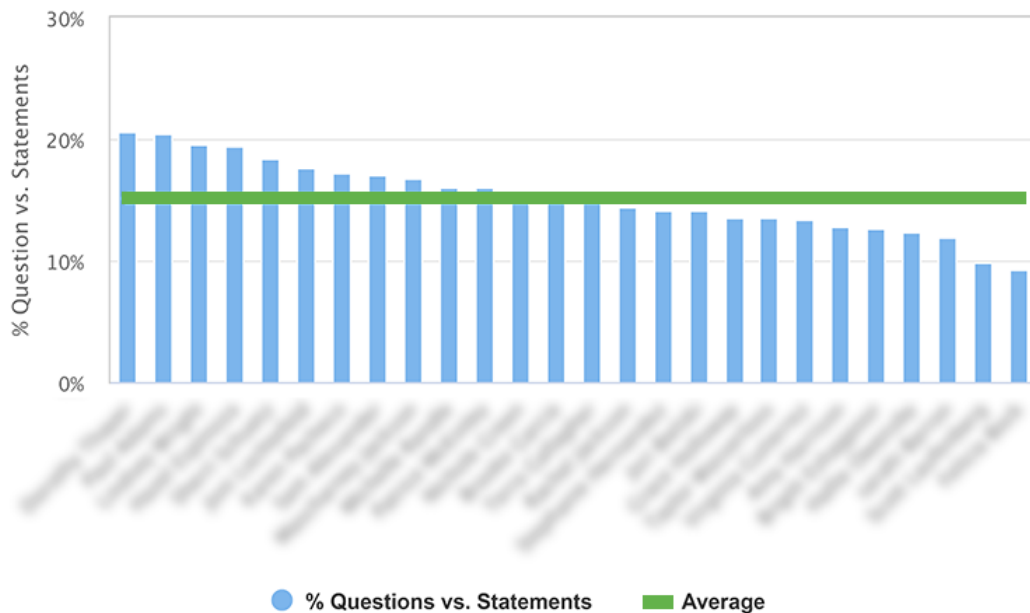

All Faculty By Grade
