

| How does your technology impact student learning?

We are K-12 experts who believe in creating awesome learning experiences for kids. If you've used technology in the classroom, you know that devices and digital tools alone don't generate student engagement. Our educators have found that awesome learning occurs when students use technology to engage with information in new or innovative ways. As a result, we have identified eight specific opportunities where technology can have a tremendous impact on student learning.

“Working with Five-Star provides dedicated professional partners that truly understand the expectations and challenges of today’s schools.”

- CANDICE DODSON, INDIANA DEPARTMENT OF EDUCATION

“Five-Star has gone above and beyond in assisting us with developing and delivering a high level of professional development.”

- LYNN BROWN, HUNTINGTON COUNTY COMMUNITY SCHOOL CORP.

Measure the effect of your technology

integration initiative with our IMPACT Analysis process. Our IMPACT Analysis process uses 3 data points (surveys, class visits, & focus groups) from 3 stakeholder groups (students, teachers, & administrators). Our experts evaluate this data and provide an in-depth report with current technology integration levels, areas of strength, and opportunities for growth. Once the process is repeated, we highlight gains and reveal how you can get to the next level.

Create a strategic approach to professional development and growth

with an Innovative Learning Plan. Don't just offer professional development. Plan for innovative learning through the use of technology! We work with your leadership team to design a customized Innovative Learning Plan that incorporates specific job-embedded opportunities with practical outcomes. Together, we will establish learning targets that can be used to identify beneficial virtual learning resources available on the Five-Star Network.

Provide powerful online professional development opportunities

for your staff with the Five-Star Network. The Five-Star Network includes PyxisEdu, a microlearning platform full of short, practical resources that are always accessible online. Content is grounded in solid instructional pedagogy, and each piece is vetted by our edtech experts. Users are presented with resources matched to their interests and needs based on results from your IMPACT Analysis and an interest survey. Teachers can easily track growth and time spent, alleviating some of the burden associated with license renewal.
