

How We Work With You

When you partner with us, you join a team that includes the brightest minds in STEM education.

We collaborate with teachers and school administrators to bring new approaches to STEM education into the classroom. We facilitate grant proposals and research with colleges, universities, and other academic institutions. We team with museums, zoos, aquariums, and National Parks to build dozens of projects and programs each year. We work with after-school programs, community maker spaces, and adult education centers to bring STEM to diverse populations. We partner with national corporations and many more organizations that share our vision.

Come with us on an incredible mission to transform mathematics and science education and shape the world of tomorrow.
